# Findings
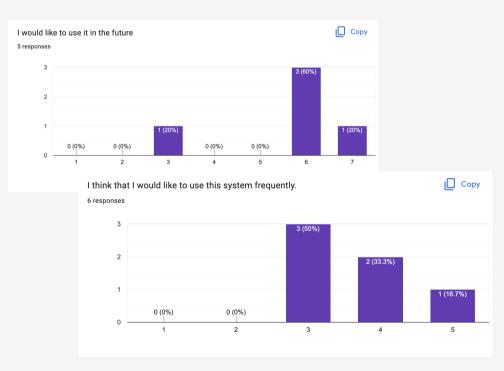

HONEST SIGNALS

In order to test our assumptions, we conducted a click-through testing session where users interacted with the prototype we made. In order **to best replicate the ideal interaction**, we overlayed our design on top of Google Calendar's current UI and matched the design elements and interaction styles.

We also broke down our idea into different features and asked questions (survey) based on TAM to collect **honest signals on the willingness and usefulness** of our idea.
